

FINS UNDER THREAT

What's it all about?

Children discuss how disasters can affect Shark populations and examine the threats to shark species and ecosystems.

Children discuss and gain an understanding how negative impacts on ecosystems can affect sharks, the environment and humans.

Children have the opportunity to look at Sharks teeth and jaws and understand how they are used and compare differences between different species.

Things to find out.....

What are some of the main factors that contribute to the decline of Sharks in the wild?

How many teeth does a Sand-tiger Shark have?

What can everyone do to help?

How does this fit the curriculum?

KS3 and KS4: Understanding of ecosystems, discussing and providing arguments to back up conclusions, communicating ideas, wider knowledge of the environment and climate change.
